Welcome Francis M Columbus from Using Python to Access Web Data            ✏️    Exit

Your answer is correct, score saved.                                        ✕

Your current grade on this assignment is: 100%

### Exploring the HyperText Transport Protocol

You are to retrieve the following document using the HTTP protocol in a way that you can examine the HTTP Response headers.

- http://www.pythonlearn.com/code/intro-short.txt (http://www.pythonlearn.com/code/intro-short.txt)

There are three ways that you might retrieve this web page and look at the response headers:

- **Preferred:** Modify the socket1.py (http://www.pythonlearn.com/code/socket1.py) program to retrieve the above URL and print out the headers and data.
- Open the URL in a web browser with a developer console or FireBug and manually examine the headers that are returned.
- Use the **telnet** program as shown in lecture to retrieve the headers and content.

Enter the header values in each of the fields below and press "Submit".
